

Why Use Animals in Research and Teaching

- Learning is more than acquisition of facts. The students should be able to think critically, analyze information and apply it and solve the problems.
- Experimentation on animals is different than:
 - Reading a text book illustrated with diagrams
 - Watching a video
 - Using a computer or experiment with inanimate models.

One can understand but actual experiment enables him do it

Benefits of Using Animals

- Knowledge gained from experiments on animals contributes to:
 - Saving life of human and animals
 - Advances in the diagnosis and treatment of diseases
 - Breeding of animals of economic benefit

Why Continue to Use Animals

- Both humans and veterinary field continue to develop and advance surgical technologies, diagnostics, investigations, methods of animal breeding
- The practitioners should learn these techniques with hands on experience
